### The Reverend Canon Stanley Brade-Birks, 1887-1982

Dr. Brade-Birks died at a nursing home at Hindhead, Surrey on 28th January 1982 in his 95th year, just ten years after presiding over the Second International Congress of Myriapodology in Manchester with such panache at the grand old age of 84.

Stanley Graham Birks graduated in Geology at Manchester in 1911 and went on to take an M. Sc. in 1914 by research on fossil fish. Along with his scientific studies he had been reading theology and was ordained in the same year as his Master's degree. His fiancée Hilda K. Brade was a fellow graduate in Botany ; she too proceeded to M. Sc. and then went on to take degrees in Medicine. As undergraduates they had both taken subsidiary Zoology. The Rev. Graham Birks' first appointment was as Curate at Darwen in Lancashire ; it was here that he and Dr. Hilda first took-up the study of Myriapods, helped and encouraged, as they gratefully acknowledge, by Dr. A. Randell Jackson of Chester. So began a long and fruitful academic collaboration ; the first four of their now famous Notes on Myriapoda appeared in 1916. The partnership was more than academic ; they were married in 1917, the Rev. Graham added Dr. Hilda's surname to his own. Notes VII et seq were published under the joint authorship of the Rev. S. G. and Dr. H. K. Brade-Birks until the twenties when pressure of medical work caused Dr. Hilda to retire from the credits. Altogether 23 papers were published under their joint authorship and a further 12 were written by the Rev. Graham alone. The last of the notes appeared in 1939 ; it was a bibliographical check list of the entire British fauna including over a hundred species, twice the number they inherited in 1916. They themselves had added eight species new to Britain, three of them, *Brachychaeteuma bradeae* (Bröleman and Brade-Birks), *B. melanops* Brade-Birks, and *Archiboreoilius pallidus* (Brade-Birks), were new to science ; the first necessitated a revision of Verhoeff's genus and the third occasioned the creation of a new genus by Brölemann. The Notes included classical studies of luminescence in geophilomorphs and of palaeozoic myriapods.

Dr. Brade-Birks took-up a lectureship at the South Eastern Agricultural College, Wye, Kent, in 1919. In 1930 he was installed as Vicar of the lovely parish of Godmersham near Wye, and later as Rector of the neighbouring parish of Crundale. In 1924 he was awarded a D. Sc. of the University of London for his work on the economic status of Myriapoda (Notes N°33, 1929-30). Whilst at Wye his wide interests in agricultural science and his teaching and examining commitments led to his appointment as General Editor of the English Universities Press

"Teach yourself farming" series ; he contributed one of the best selling Teach Yourself titles : Good Soil (1944). On retiring from his lectureship in 1948 he was able to widen his interests beyond the constraints of his professional appointment and began to compile the Encyclopaedia of General Knowledge which was eventually published by the EUP. I visited him in 1954 ; he had the components on index cards which covered every available surface of the study at Godmersham Vicarage.

Many will remember Dr. Brade-Birks' effective presidency of the second Congress in Manchester in 1972. He welcomed members heartily in three languages and contributed to every part of the academic and social success of the meeting before, during and after the Congress. Later in 1972 I was entertained by Dr. Hilda and her husband in Canterbury. Dr. Graham walked me off my feet round the cathedral and other historic parts of the city. He confessed to being a little tired after the Jane Austen bicentenary celebrations (Jane Austen's brother was squire of Godmersham), having prepared and delivered several lectures on the famous novelist. In 1975 Dr. Graham was preaching at the Anniversary services at his old church at Burnage in Manchester and visited us at our home at Prestbury in Cheshire. Again he taxed the stamina of my wife and I, enthusiastically walking us round our church and village explaining features of architectural and historical significance. In 1976 the Brade-Birks visited Greece. Finally, in March 1977 Dr. Graham retired from Godmersham after 47 years in the parish ; he and Dr. Hilda moved to the quiet College of St. Mark in the village of Audley End, Saffron Walden, Essex. Dr. Graham was still busy with his genaeological research and answering his many correspondents in a firm clear hand.

In January 1980 the Brade-Birks moved to a nursing home at Hindhead in Surrey. They both remained cheerful and mentally very alert despite growing physical infirmities. Now, at the end of a good life we extend to Dr. Hilda, her two daughters, two grandsons and two grand-daughters, our best wishes and sympathy and join them in giving thanks for BB's long, varied and fruitful life of service.

J. Gordon BLOWER

## IN MEMORIA DI CARLO STRASSER

La notte del 16 ottobre 1981 si è spento serenamente a Trieste, tra le pareti domestiche, Carlo Strasser.

Era nato a Trieste il 26 giugno 1903, dal padre Otto, Cittadino germanico di Aulendorf presso Stoccarda, di religione protestante, e dalla milanese Giulia Sickenberger, italiana di sentimenti e di religione cattolica.

A Trieste trascorre un'infanzia serena, ma alla fine della prima guerra mondiale la famiglia Strasser deve trasferirsi a Vienna. Qui Carlo, che dimostra notevole propensione per gli studi, finisce di frequentare il Realgymnasium e consegue la maturità (1921). Nello stesso anno ritorna nella città natale, dove però deve impiegarsi nella ditta paterna, rinunciando ai tanto sospirati studi universitari.

La passione del genitore per l'escursionismo e i contatti con il mondo dei naturalisti triestini, all'epoca particolarmente fervido di idee ed entusiasmi orientano il giovane Carlo verso l'alpinismo e la speleologia. Con l'amico Egon Pretner raccoglie i primi Diplopodi e su consiglio del Prof. Giuseppe Müller ne inizia lo studio sistematico, guidato nei primi e difficoltosi passi da un insigne maestro, Karl Wilhelm Verhoeff. Con Verhoeff egli trascorre un periodo breve ma intenso di raccolte in Toscana ed all'Elba, ricalcavandone nozioni e incitamento a scrivere i primi lavori.

Nel 1931 sposa Herta Wandling, triestina di origine austriaca, dalla quale avrà tre figli. Seguono anni sereni, dedicati alla raccolta ed alle amate escursioni.

L'incalzare degli eventi bellici però lo sprona a servire volontariamente quella patria da cui sempre era vissuto lontano. Il 1941 lo trova come interprete fra tedeschi ed italiani, prima in Sicilia, poi in Africa, In Grecia (Creta) ed altrove, sino alla prigionia ed al ritorno, dopo fortunoso viaggio, in Italia, dove riabbraccia la famiglia a Tarvisio (1946).

Il secondo dopoguerra, a Trieste, non è migliore del primo, soprattutto per un cittadino tedesco, ma i problemi dell'immediata sopravvivenza non smorzano in Lui l'amore per il Carso Triestino, meta delle gite domenicali, di cui fa conoscere ed apprezzare ai tre figli ogni anfratto, ogni dolina.

Riacquistata la sicurezza economica, giunti i figli alla maggiore età, riprendono con rinnovato ardore le ascensioni nelle Alpi

Orientali : i soci del C.A.I.-XXX ottobre lo ricorderanno sempre compagno espertissimo di tante gite.

Inizia così per il Nostro un periodo fecondissimo di studi e di soddisfazioni scientifiche : nel 1967 diviene membro corrispondente della Senckenbergische Naturforschende Gesellschaft di Francoforte e poco più tardi l'Università di Innsbruck gli conferirà la Laurea honoris causa. La sua attività di studioso dei Diplopodi, dei quali è ormai esperto di fama anche extraeuropea, continuerà intensissima sino a pochi mesi dalla morte.

"When I saw him last in June, 1979, - ricorda il grande miriapodologo americano Richard Hoffman - he was in robust good health and actively working on Grecian material. I would have guessed that he had still ten active years... What a great pity that he did not have a few more productive years!... He made the astounding transition from a "Verhoeffian" in his young days, into modern systematics when he was well along in years, and then his last papers were each better than the one before, a great change from the usual rule". E' questa, del resto, convinzione unanime di tutti i colleghi che hanno letto i Suoi lavori.

Vita ed opera di Carlo Strasser si comprendono appieno solo illustrando alcuni aspetti della Sua personalità. Uomo pacato ed introverso, sobrio e modesto nei modi, era di gusti schiettamente semplici. Chi lo avvicinava per la prima volta, passato il primo istante di soggezione, restava colpito dal linguaggio conciso e dai modi riservati, cortesemente distaccati, ma allo stesso tempo si sentiva oggetto di un'attenzione benevola e discreta.

Osservatore fine della realtà e delle persone attorno a Lui, amava riversare le sue impressioni in un diario, che compilò con assiduità meticolosa dal 1921 sino a poco prima della fine. I suoi ricordi escursionistici sono raccolti in 13 volumi fittamente stenografati, spesso corredati di foto, ricchissimi di date, di nomi, di luoghi.

Ma questa cura costante dell'annotare ordinato, che l'accompagnò per tutta la vita, non era fine a se stessa. Profondamente legato alla famiglia, nella quale riversava tutto il suo affetto, Carlo Strasser è anche l'autore di uno dei più singolari ed affettuosi che un uomo abbia mai fatto alla compagna della propria vita : un volume di Erinnerungen (Ricordi) scritto esclusivamente ed in una sola copia per la moglie Herta. Poco meno di quattrocento pagine dattilografate senza spaziatura, in cui scorrono, con stile scarno e vivace, gli anni dal 1941 al 1946, quasi un pugno per tante ansie, un vincolo nella separazione. Dice l'introduzione : "Der Inhalt der

folgenden Blätter verdient es sicher nicht, der "Nachwelt" überliefert zu werden. Als ich sie damals aufzeichnete, waren sie mir eine Stütze und haben mir über viele öde und inhaltslose Stunden meiner Soldatenzeit hinweggeholfen... So habe ich begonnen, um die graue Langeweile zu bekämpfen und meinem Dasein doch so etwas einen Inhalt zu geben, meine Erinnerungen aufzuzeichnen..."

Ecco dunque il "segreto" di Strasser : una profonda vita interiore che si traduceva all'esterno in pacatezza, comprensione, sincerità di sentimenti e metodo, nella vita di ogni giorno come nell'opera scientifica.

Scompare con lui uno dei tanti triestini che, nati in questa terra incrocio di lingue e di religioni, di montagne, mare e carso, hanno saputo dare ad essa la parte migliore del proprio spirito.

Alessandro MINELLI

(Extrait d'une note à paraître dans le Boll. Mus. civ. St. nat. Verona, en collaboration avec Pietro Brandmayer, et comprenant toute la liste des travaux de Strasser, dont il est possible, sur demande, d'obtenir un exemplaire au secrétariat permanent du C.I.M.)

## COMPTES RENDUS

Vth International Congress of Myriapodology

Radford (USA) August 3-7, 1981

The Vth International Congress began with the arrival of the first delegates on July 31 at the Roanoke (Virginia) airport. On the following two days short excursions were made in the vicinity of Radford, as additional delegates continued to arrive. Congressional headquarters were established in Muse Hall at Radford University, which also served as a dormitory and meeting-place.

An informal wine and cheese party was held on the evening of Monday, August 3, in the Muse Hall penthouse, allowing delegates to interact with each other as well as some members of the University community. On Tuesday, August 4, morning and afternoon sessions were devoted to papers on systematics and biogeography, and a group photograph was made. Tuesday evening, a presentation made by Dr. Henrik ENGHOFF on the ordinal phylogeny of Diplopoda provided the occasion for discussion of both the higher taxa themselves and the cladistic methodology utilized by Dr. ENGHOFF.

Sessions convened on Wednesday, August 5, were devoted to papers in behavior, evolution, palaeontology, and morphology, followed in the very hot afternoon ( $35^{\circ}\text{C}$ ) by watermelon under the trees outside of Muse Hall. In the evening, Dr. Thomas EISNER (Cornell University) presented an illustrated lecture on the chemical defense mechanisms of diplopods and other arthropods.

Thursday, August 6, was the first day in many weeks that was cold and rainy, it was coincidentally the day selected for a group excursion by autobus. Leaving Radford around 0930, the group stopped briefly at the nearby Virginia Polytechnic Institute and State University for a tour of the Entomology Department, and a brief look at a large American University. Continuing onward, the bus ascended the road up Salt Pond Mountain (1300m (through clouds and light rain to a stop for lunch at the Mountain Lake Hotel. The great heat of the previous day was now replaced by a cool and damp  $10^{\circ}\text{C}$ .

The excursion continued on the mountain top to Mountain Lake Biological Station, a facility operated for nearly 50 years by the University of Virginia. Here, Dr. J. J. MURRAY (director) provided a guided tour of the building and gave an illustrated talk on the region and its biological opportunities for research. Afterwards, many of the delegates swarmed outside into the surrounding forest and began searching for specimens. Because of the rain, the final goal of the excursion

had to be abandoned, and the group returned to Radford about 1700, at last under clear and warm skies.

On Friday, August 6, the two sessions were devoted to papers in physiology and ecology, and late in the afternoon a business meeting was organized by President BLOWER to consider the opportunities for the 1984 congress. The invitation by Dr. JEEKEL was accepted, and the VIth congress - as announced elsewhere in this Annuaire - will be scheduled for Amsterdam.

Finally, a congressional banquet was held on Friday evening, at which time President BLOWER presented a very well-received address on the past, present, and future of the C.I.M. This occasion was notable for a high degree of camaraderie among all the participants, which was continued informally afterwards in the lobby of Muse Hall. On the following morning the delegates began to disperse, many of them commencing vacation travel to various parts of the United States.

In all, 39 primary delegates were registered, many of them being accompanied by family members, so that a total of over 50 persons made up the congress community. By country of origin, the delegates were : AUSTRALIA : Baker, Koch ; AUSTRIA : Meyer ; BELGIUM : Kime ; DENMARK : Enghoff ; FRANCE : Demange, Descamps, Geoffroy, Sahli ; GERMANY (FEDERAL REPUBLIC) : Rosenberg, Schlüter, Schönrock ; INDIA : Bano ; NORWAY : Meidell ; SWEDEN : Scheller ; UNITED KINGDOM : Blower, Eason, Fairhurst, Lewis, Littlewood, Rolfe ; USA : Carrel, Eisner, Franklin, Hannibal, Hoffman, Johnson, Kiser, Loring, Mundel, Shear, Shelley, Renate Snider, Richard Snider, Summers, Tipton, Valentine, Withrow, Whitchead.

The organizer of the Congress wishes to make the following announcements especially for those who attended :

1. At this time, adequate funding for publication of a proceedings volume has not been found, but many possibilities remain to be explored and surely the necessary amount ( $\pm$  US \$ 13,000) will be located.
2. Two members of the Radford University publicity department went on the excursion to record the event in words and photographs. An interesting article has now been published, reflecting the excursion as it appeared to a non-scientific journalist, and copies will be sent free to those delegates who will write here for a copy.
3. There are still about six copies of the Congress photograph on hand, which will be sold to the first bidders, at the basic cost of US \$ 5.00 each. Please send personal check (or International Money Order) to the undersigned, made payable to him.
4. Finally, the organizer wishes to extend his personal thanks and best wishes to everyone who came to Radford, and this regrets that the burden of daily arrangements prevented as much social contact as he would have wished. Looking to 1984 with great pleasure and expectation...!

## FIFTH INTERNATIONAL CONGRESS AT RADFORD

Myriapodologists from seven countries in Europe, India, Australia and eleven of the United States of America enjoyed the hospitality of Professor Richard Hoffman and the University of Radford in Virginia. On the eve of Congress we had a party on the roof and in the penthouse of Muse Hall hosted by the President of the University, Dr. Donald N. Dedmon. There followed two days' sessions, a day's outing to Mountain Lake and a final day of meetings. For most of the time it was hot and sunny; business was punctuated with visits to the swimming pool on the campus, water melon feasts in the garden and the usual rewarding chats over a cup of coffee, a beaker of coke or, occasionally, beer.

Sessions were opened on Tuesday morning, 4th August by Dr. Stump, Dean of the College of Arts and Sciences at the University. First on the programme and certainly least in size came the Pauropoda. Scheller compared the faunas on either side of the Atlantic. There were at least several in the audience who had actually seen a pauropod in the field; Dr. Scheller had taken a few of us out the day before and shown one to us. Diplopod taxonomists followed: Shelley on Xystodesmidae, Shear on Tingupidae and Hoffman with a fascinating hypothesis. Two different character states in millipedes seem to be emphasised to mutual exclusion: somatic characters in great diversity accompanied by remarkably constant gonopod morphology, or gonopods strikingly different, but with body-forms so similar that females are indistinguishable. Hoffman suggested that an initial adaptive radiation of body forms might follow dispersal to a new area; when the somatic form had adapted to the environmental constraints, there would follow a stable period during which the conservative gonopods would diversify. *Sigmoria* exemplified this second phase; Shelley had earlier given a beautifully illustrated account of the subtle differences in the gonopods of "Sigmoid" genera. The first phase was typified by *Chondrodesmus*. Enghoff later described habitat differentiation of endemic Madeiran *Cylindroiulus* and noted that these also typified Hoffman's first phase, the so-called isogenetic species of Nell Causey.

A discussion of the classification of the Diplopoda as a whole followed in the evening. Enghoff used the new phylogenetics to support some of the conclusions of the older intuitive systematics and to doubt other parts. The main message perhaps received by the establishment was that they shoul be more explicit, lay their cards on the table and open their hands Popperian falsifiability. Sahli, taking a sideways glance from his patient work on the neuro-endocrine system, found evidence there that old Julifaria is a perfectly natural group. Being a millipede man it has always seemed to me that chilopod taxonomists have a more difficult time. Eason is doubting the reliance hitherto placed on the postero-lateral tergite projections in *Lithobius* and has found a more reliable characters in the shaps of the first tergite. Lewis is also becoming increasingly disillusioned by the utility of characters in scolopendrids ; he is poised to lump some of the *Ostostomia* species and is not enamoured of a system which allows some good species to fit into several genera as at present defined. Koch reintroduced a famous name and retained its aura with a nice account of infraspecific variation in colour pattern linked to geographic areas in Western Australian *Scolopendra* spp. Meidell examined the possibility suggested in Hamburg that epimorphic centipes may show a degree of anamorphosis. It was a relief to hear that he had found no evidence when the correct sex had been attribued to the larval stadia.

There was a nice group of three excellent papers on fossil myriapods. Hannibal described a curious modified posterior leg in a euphoberiid and some carboniferous oniscomorphs. Mundel had marshaled 1,600 amateur geologists to help him find and split open concretions from the carboniferous of Mazon Creek and showed us a selection of this amazing material. Rolfe had Devonian fossils from New York State and Scotland, so well preserved that his audience were trying to remember where amongst extant genera they had seen such morphology.

It was worth the trip to the USA just to hear Professor Tom Eisner on chemical defences of millipedes and other arthropods. His Congressional address was beautifully delivered, with superb film and lots of discussion of afterwards. Carrel thought it worth a trip to Britain to study the ozodenes of *Glomeris marginata* and it was good to hear him back home reporting his results on recharging rates. Perhaps we know more about millipede defence glands than about the enemies they may deter. Baker had travelled from Australia to

Portugal to seek the enemies of *Omnatoiulus moreleti* and told us about his search. He probably thought his further journey to Virginia well worth while just to hear Snider's amazing account of carabids and staphylinids preying upon *Polydesmus inconstans* and *Ophyiulus pilosus*. The beetles were evidently well satisfied with their diet as she had succeeded in getting them to oviposit and reared the eggs through to pupation.

There was an interesting set of papers on ultrastructural behavioural and physiological studies. The coxal organs of chilopods were the subjects of two separate and contrasted papers by Rosenberg and Littlewood ; we hope for some interesting developments here in time for Amsterdam. Descamps had succeeded in stimulating the pars intercerebralis of *Lithobius*, confirming his earlier conclusions from ultrastructure and was able to link - the brain directly into the neuro-humeral control of spermatogenesis. Schönrock reported on very careful and precise analyses of the function and ontogeny of the antennal sensillae of *Polydesmus inconstans*. Blower attempted to show that the development of the ocular field in *Choreumatida* follows a similar plan to that in *Julida* and considered what might be the physiological significance of adding ocelli in proportion to size. Schlüter gave an interesting analysis of the glands on the anal valves of *Scaphiostreptus* which may play a role in nest building and moulting chamber construction. When Franklin told us that 'time was nature's way of making sure that everything doesn't happen at once' he had his audience in his hands and convinced them there were still problems of diplopod locomotion awaiting solution. Valentine's research on grooming behaviour promises to be an intriguing new area of study.

Ecological studies still appeared last on the programme but are increasing in importance, elegance and range. Life-cycle study came from the high Alps, Paris, Michigan and Bangalore. Meyer has measured activity along with abundance and so avoided the pitfalls of earlier work ; he was able to relate activity peaks to specific points of the life cycles of the millipedes, under the snow or in the brief season of thaw. Bano described the strategy of *Jonespeltis splendidus*, feeding in groups in the earlier stadia and diapausing in older stadia in moulting chambers to pass the dry season. Fairhurst re-examined principles of life-history strategy in relation to habitat. Fairhurst and Kime gave a substantial report of progress in the European habitat and distribution survey they initiated at Gargnano. Geoffroy was interested in the spatiotemporal

patterns of coexisting populations of millipedes and had some excellent graphics of changing vertical distribution with time. Johnson and Summers were working with centipede communities ; Johnson had some pointed comments on the dangers of determining habitat preferences from inadequate sampling techniques. Summers perhaps stole the ecological thunder by developing a rather nice measure of relative habitat space and showing this to be closely-correlated with species diversity at a number of sites in the southern Appalachians ; this must be the most practical and realistic index of diversity soon to be in the literature.

Although the ladies had not returned from a shopping trip in Blacksburgh until thirty minutes before the farewell dinner, in the event a grand evening was had by us all. Absent friends were thought of. Demange was thanked for his stirling work for CIM on our behalf and was asked to deliver the good wishes of Congress to his colleague Mauriès. Professor and Mrs Hoffman were thanked for engineering and sustaining such a friendly and successful Congress. We hope the good work begun by Freddie Laker may allow all our American colleagues to return to Europe for the next congress. We further hope that the worls scene will turn out to be quite the opposite of Orwell's prediction and that we shall be able to meet our colleagues from Eastern Europe.

Your reporter managed to resist Coke during his visit but every day he did' have a nice day', enjoyed the free matches and the unlimited refills of his coffee cup. He was taken aback when offered the remains of a huge meal presented to him in a go-cup. He arrived back home with a satisfying overview of Litter Critters to sustain him until Amsterdam.

PROVISIONAL ATLAS of the MYRIAPODS of EUROPE

Following the decision of the 4th International Congress of Myriapodology, it is the intention to =

1°) Send records of Myriapods distribution through Europe to the European Invertebrate Survey and contribute to the Atlas they are in preparing.

2°) To ask for ecological details to accompany records so that the distribution of the Myriapods may be related to their habitat and not just to their geographical region. This could lead to a more detailed publication of great use to myriapodologists working in the field.

It is hoped in the future to send both =

- a) Maps of countries marked with the universal transverse mercator grid (this is the grid used by the European Survey) and,
- b) Ecological habitat cards with lists of the Myriapods of their region, to volunteers who would fill in their data and send them to the survey.

VOLUNTEERS ARE ASKED TO CONTACT

BRITISH MYRIAPOD GROUP

SPRING MEETING 5-8 APRIL 1982  
PLYMOUTH POLYTECHNIC

A number of people have expressed an interest in coming to the meeting at Plymouth next April.

Ron Daniel has arranged accommodation at Plymouth Polytechnic. For three nights at Gilwell House, the newly opened student hostel close to the Polytechnic. The cost will be £40. This includes all meals including packed lunches on two days and the use of the bar. Laboratory facilities in the Biology Department will be open for examination of collected material.

# MYRIAPODA ET ONYCHOPHORA

## LIST OF WORKS PUBLISHED OR IN PRESS IN 1981

Papers already with the printer in 1980 do not figure in the list if they are still in press in 1981.

Since 1977, works in press will be only listed if accompanied by the name of the periodical and the approximate number of pages.

## LISTE DES TRAVAUX PARUS ET SOUS-PRESSE EN 1981

Les notes déjà sous-presse en 1980 et qui le sont encore en 1981 ne figurent pas dans la liste ci-après.

Depuis 1977, les travaux sous-presse ne figurent dans la liste que si le nom du périodique et le nombre approximatif de pages sont indiqués.

## LISTE DER ERSCHIENENEN -UND IM DRUCK -ARBEITEN DES JAHRES 1981

Einige Arbeiten, die sich schon 1980 im Druck befanden, sind es noch 1981 ; demzufolge scheinen sie nicht in der Liste auf.

Seit 1977, werden die Arbeiten im Druck nur auf die Liste stehen, wenn der Name der Zeitschrift und die ungefähre Zahl der Seiten angegeben sind.

- 001 AC.HAR K.P. et CHOWDAIAH B.N..- The use of C-banding technique in the chromosome studies of a millipede species Carlogonus acifer.
- 002 Caryologia, 33, 2: 185-191, 1980
- AGOSTINI S., TERRAGNI F. et ZAPPAROLI M..- La grotta Patrizi (La 183) vel Comune di Cerveteri. Nat. Circ. Speleol. Romano, 24, 1-2: 3-20, 1979
- 003 ALBERT A.M..- Species spectrum and dispersion patterns of Chilopods in three soling habitats. Pedob., sous presse.
- 004 ANDERSSON G..- Post-embryonic development and geographical variation in Sweden of Lithobius crassipes L.K. (Chilopoda:Lithobiidae). Ent. scand., 12: 437-445, 1981
- 005 ANDERSSON G..- Taxonomical studies on the post-embryonic development in Swedish Lithobiomorpha (Chilopoda). Ibid., supp. 15: 105-124, 1981
- 006 ANDERSON J.M..- Bacteria in the food, gut contents and faeces of the litter feeding millipede Glomeris marginata (Villers). Soil Biol. biochem., 12: 251-254, 1980
- 006 b ANDERSON J.M..- Assimilation of <sup>14</sup>C-labelled leaf fibre by the millipede Glomeris marginata (Diplopoda:Glomeridae). Pedob., 23: 120-125, 1982
- 007 ANDERSON J.M. et INESON P..- Interactions between soil Arthropods and microbial populations in carbon, nitrogen and mineral radient fuxes from decomposing leaf litter. in: Nitrogen as an ecological factor. Ed. I. ROSISON and S. Mc NEILL. Blacwell scientific, Oxford, sous presse.
- 008 AOUTI A..- La confection des oothèques pendant la ponte chez Pachybolus laminatus Cook (Diplopoda, Chilognatha). Ann. Univ. Abidjan, E, Ecol., 13: 39-51, 1980
- 009 APFERSON Ch., et AXTELL R.C..- Arthropods associated with shoreline deposits of Eurasian Watermilfoil (Myriophyllum spicatum) in the Currituck Sound, North Carolina, USA. J. Ga. Entomol. Soc., 16, 1: 53-59 .
- 010 BALA SUBRAMANIAN S..- Studies on the nature of the cuticular components of a centipede Scolopendra morsitans (Myriapoda). M. Phil. Thesis Univ. Madras, 1977
- 011 BALA SUBRAMANIAN S..- Nature of carbohydrases in a Centipede Ethmostigmus spinosus (Chilopoda). J. Mad. Univ., 41: 22-27, 1978

- 012 BECK L. et FRIEBE B..- Verwertung von Kohlenhydraten bei Oniscus asellus (Isopoda) und Polydesmus angustus (Diplopoda). Pedobiologia, 21, 1:19-29
- 013 BILINSKI S..- Ultrastructural studies on oogen esis in Symphyla.  
2: Cortical granules and the chorion. Cell. Tissue Res., 215, 2:431-436
- 014 BOLOGNA M.A. et ZAPPAROLI M..- Note sulla fauna della grotta della Matagna dei Fiori (Abruzzo, Teramo). Not. Circ. Speleol. Romano, 24, 1-2:81-94, 1979
- 015 CAMATINI M. et SAITA A..- Observazioni sull'ultrastruttura di alcu- ni muscoli di Scutigera coleoptrata L. Rend. Cl. Sc. Fis., mat Nat., serVIII, 54, 3: 443-447, 1968
- 016 CARRERAS J. et GRISOLIA S..- Vanate inhibits 2,3-bisphosphoglycerate dependent phosphoglycerate mutases (EC 2.7.5.3.) but does not affect the 2,3 -bisphosphoglycerate independent phosphoglycerate mutases (EC 5.4.2.1.). Biochem Biophys. Res. Commun., 96, 3:1267-1273, 1980
- 017 CONDE B..- Un Pénicillate cavernicole de Majorque. Arch. Sc., sous presse.
- 018 COOPER R.L. et SKINNER J.D..- Importance of termites in the diet of the aard wolf Proteles cristatus in South Africa. S. Afr. J. Zool., 14, 1:5-8, 1979
- 019 CRABILL R.E..-Synonymy by way of teratology (Chilopoda:Lithobiidae). Proc. entomol. Soc. Wash., 83, 2:359
- 020 " .- On the true identity of Zygethobius pontis (Chilopoda Lithobiomorpha:Henicopidae). Ibid., 83, 2:360
- 021 .- The identity of Dysmesus : a new generic synonymy (Chilopoda:Geophilomorpha:Geophilidae). Ibid., 83, 1:174
- 022 CRAWFORD C.S..- Biology of desert Invertebrates. Berlin, Heidelberg, New York: Springer -Verlag. 326pp.
- 023 CRAWFORD C.S. et Mac CLAIN E.L..- Habitat use during winter relative to water balance in a Harpagophoridae millipede from the Namib desert. Madoqua, sous presse.
- 024 CROCKER R.L. et WHITCOMB W.H..- Feeding niches of the big-eyed bugs Geocoris bullatus, Geocoris punctipes, and Geocoris uliginosus (Hemiptera:Heteroptera:Lygaeidae:Geocorinae). Environ. Entomol., 9, 5:508-513, 1980
- 025 DEMANGE J.M..- Myriapoda-Chilopoda in : Contributions à l'étude de la faune terrestre des îles granitiques de l'archipel des Séchelles (Mission P.L.G. Benoit-J.J. van Moll, 1972). Rev. Zool. africaine, 95, 3: 623-652

- 026 DEMANGE J.-M...- Contribution à la connaissance de la faune myriapologique du Zaïre (Myriapoda:Diplopoda). Publ.Ist.entom.  
Univ.Pavia, 15:1-19
- 027 DESCAMPS M...- ~~β-~~ecdysone influence on the spermatocyte growth in Lithobius forficatus L. (Myriapoda:Chilopoda). Autoradiographic (optical level) and ultrastructural studies. Arch. Biol., 92, 1:53-65
- 028 ".- Hormonal influence on spermatogenesis in Lithobius forficatus L. (Myriapoda:Chilopoda). 9e Symp. Int. Endocrino comparée, Hong-Kong, 1981, sous presse.
- 029 .- Influence of the electrostimulation of the pars intercerebralis on the spermatocyte growth in Lithobius forficatus L. (Myriapoda:Chilopoda). Autoradiographic study. 5th Int. Cong. Myriapodology Radford, 1981, sous presse.
- 030 DESCAMPS M. et LASSALLE B...- Electrophysiological evidence for direct ecdysteroid action on the brain in Lithobius forficatus L (Myriapoda:Chilopoda). Reprod.Nutr.Develp., 21, 5A: 681-687

## SUJETS ACTUELLEMENT ABORDÉS OU °EN PROJET

Cette rubrique n'est pas complète. Elle est la somme des renseignements transmis par 95 collègues qui ont bien voulu répondre à notre questionnaire, ce dont nous les remercions bien vivement.

## MATTERS BEING DEALT OR °SCHEDULED

This list is no claimed to be complete. It consist in all information passed to us by 95 colleagues who were kind enough to answer our questionnaire, for which we thank them very much.

## BEREITS LAUFENDE ODER °IN VORBEREITUNG BEFINDLICHE VORHABEN

Dieser Abschnitt erhebt keinen Anspruch darauf vollständig zu sein. Er enthält die Summe der Hinweise, die uns durch 95 Kollegen zugegangen sind, welche so freundlich waren, unsere Fragebogen zu beantworten, und denen wir verbindlich danken möchten.

## OUVRAGES GENERAUX :

DEMANGE , Traité de Zoologie du Prof. P.P. Grassé (en coll. avec Mme et MM. Condé, Descamps, Herbaut, Geoffroy, Joly, Juberthie-Jupeau, Mauriès, Sahli).

DOHLE , Myriapoda in Morphogenese der Tiere (Ed. Seidel).

DUNGER , nouvelle version de "Myriapoda" pour "Lehrbuch der Speziellen Zoologie (Kästner) , prévu pour 1983.

HOFFMAN , manuel des Diplopodes Néarctiques.

JUBERTHIE-JUPEAU , Myriapodes in "Neurohemal organs in Arthropoda" (Gupta Ed.)

LAWRENCE , Centipeds and Millipedes of Southern Africa (A.A. Balkema, Cape Town).

## STRUCTURE ET PHYSIOLOGIE :

### MORPHOLOGIE :

HASENHUETL, Eurypauropodidae.

KANE, Polyxenus lagurus en Amérique du Nord.

RAVOUX, Symphyles.

### VARIATIONS, STATISTIQUES :

KOREN, variabilité intrafamiliale des Cryptopidae (Autriche).

WÜRMLI, ° études statistiques chez Lithobius.

### TEGUMENTS :

HUBERT, \*dépressions épicuticulaires des Diplopodes.

SCHLUTER, tégument interne des Diplopodes.

SULLOCHANA , inhibiteurs de la synthèse de chitine (en rapport avec métabolisme).

### SENSILLES :

ERNST, sensilles cuticulaires antennaires des Geophilides (ultrastructure).

FRANKLIN, \*structure et fonction du "finger organ" de Polydesmus inconstans.

HAUPT, °étude comparative du développement des organes sensoriels.

NGUYEN-DUY, ultrastructure des organes sensoriels antennaires (Polyxenus lagurus).

SCHONROCK, développement des antennes et des sensilles chez les jeunes Polydesmus inconstans (ultrastructure)

*SYSTEME NERVEUX, NEUROSECRETION, NEUROPHYSIOLOGIE :*

DESCAMPS, activité électrique (Lithobius) spontanée des cellules neurosécrétrices cérébrales; influence des neurotransmetteurs; action des neurotransmetteurs sur JAMAULT-NAVARRO, neurosécrétions cérébrales (Lithobius). spermatogenese.

JOLY, mise en évidence des cholinestérases et des neurotransmetteurs dans le système nerveux central et les glandes endocrines (Lithobius).

JUBERTHIE-JUPEAU, organes neurohémaux.

SAHLI, endocrinologie des Cambalida et Colobognatha.

APPAREIL DIGESTIF, DIGESTION, ALIMENTATION :

ANDERSON, rôle des bactéries dans le tube digestif des Diplopodes.

HUBERT M., différenciations proctodéales (Diplopoda).

LAFFERT, cytologie des glandes chloragogènes et de l'appareil digestif (Scaphiostreptus).

SEIFERT, appareil digestif des Paupropodes.

STRIGANOVA, nourriture des myriapodes de forêts tropicales.

APPAREIL RESPIRATOIRE, RESPIRATION, METABOLISME :

CHOCKALINGHAM, métabolisme des myriapodes.

PENTEADO, régulation respiratoire (Arthropodes); acclimatation thermique et métabolique des diplopodes tropicaux.

SEIFERT, appareil respiratoire des Paupropodes STOJALOWSKA, métabolisme respiratoire (Diplopoda).

APPAREIL CIRCULATOIRE, HEMOLYMPHE :

BALA SUBRAMANIAN, biochimie de l'hémolymphé des myriapodes.

*APPAREIL EXCRETEUR, EXCRETION :*

HUBERT M., différenciations proctodéales (Diplopoda).

ROSENBERG, rein maxillaire des Chilopodes.

SEIFERT, néphrocytes et organes de Malpighi des Paupropodes.

*GLANDES, SECRECTIONS :*

JOLY, glandes endocrines (voir *NEUROSECRETION*); action des hormones exogènes au niveau cellulaire (Lithobius).

LITTLEWOOD, structure et fonction des glandes coxales des Chilopodes.

NGUYEN-DUY, ultrastructure et cycle des glandes filières (Callipus foetidissimus).

ROSENBERG, glandes coxales des Chilopodes; glandes ventrales des Geophilomorphes.

SCHLUTER, glandes exocrines des Diplopodes.

SEIFERT, évolution de l'organe producteur d'ecdystéroïdes (Arthropoda).

APPAREIL GENITAL, voir REPRODUCTION et DEVELOPPEMENT

*ULTRASTRUCTURE :*

BELLAIRS, larves de Streptogonopus phipsoni.

ERNST, sensilles antennaires de Geophilides.

MARQUES, voir PARASITISME.

NGUYEN-DUY, organes sensoriels antennaires de Polyxenus lagurus. filières de Callipus.

SCHONROCK, développement des antennes et sensilles de Polydesmus.

*EXPERIMENTATION:*

JOLY, voir *NEUROSECRETION*:

SAHLI, voir PERIODOMORPHOSE.

*REPRODUCTION ET DEVELOPPEMENT :*

APPAREIL GENITAL :

SAITA, appareil génital des Chilopodes.

*GAMETOGENESE :*

DESCAMPS, métabolisme des spermatoctyes (Lithobius); action des neurotransmetteurs sur la spermatogenèse.

**DEVELOPPEMENT POSTEMBRYONNAIRE:**

ANDERSSON, Lithobiomorphes.

BANERJEE, Trigoniulus lumbrecinus.BELLAIRS, Streptogonopus phipsoni.

HASENHUETL, Euryphaeopodidae.

MINELLI, Chilopoda.

SAHLI, cycle de Diplopodes nuisibles aux cultures.

SCHONROCK, jeunes stades de Polydesmus inconstans; développement des antennes et sensilles.**PERIODOMORPHOSE:**

SAHLI, recherches expérimentales.

**ETHOLOGIE ET ECOLOGIE :****ETHOLOGIE:**BAKER, Ommatoiulus moreleti au Portugal; contrôle biologique en Australie.BANERJEE, Trigoniulus lumbrecinus.BELLAIRS, essaimage des larves de Streptogonopus phipsoni.KANE, Polyxenus lagurus en Amérique du Nord.

MC CLAIN, Diplopodes du désert de Namibie.

**PREDATEURS, DEFENSES, HOTES, PARASITISME :**

ANDERSON, voir APPAREIL DIGESTIF

BAKER, °les ennemis naturels d'Ommatoiulus moreleti (Açores et Madère).

CRAWFORD, microbiotes, voir ECOLOGIE.

JANARDANAN, Grégariines des Diplopodes du Kerala.

MARQUES, chorologie et relations hôte-parasite entre Grégariinomorphes et Lithobiomorphes.

°ultrastructure et cycles de coccidies parasites de Diplopodes; °révision de la faune parasitologique grégarienne des Chilopodes.

**ECOLOGIE :**

AOUTI, peuplement des forêts de Côte d'Ivoire (Diplopodes).

ALBERT, Chilopoda (Allemagne): étude écologique de 3 habitats; °rôle écologique de 2 populations de Lithobiides.

ANDERSON, rôle des Diplopodes dans la minéralisation nitrogénique des sols de forêts.

BANERJEE, Trigoniulus lumbrecinus. BELLAIRS, larves de Streptogonopus phipsoni.

CHOCKALINGHAM, °populations de Myriapodes (Inde).

CRAWFORD, relation entre Ecosystèmes et Microbiotes intestinaux (Diplopoda désertiques)  
°structure et fonction de l'Ecosystème intestinal.ENGHOFF, habitat et ségrégation des Cylindroiulus endémiques de Madère.

GEOFFROY, populations et peuplements de Diplopodes et Chilopodes en forêt tempérée.

HASENHUETL, Euryphaeopodidae. (Myriapodes).

JORDANA BUTTICAZZ, effets de l'exploitation et du reboisement sur la faune du sol

KARAMAOUNA, populations et peuplements (Diplopoda) dans un écosystème insulaire méditerranéen (Grèce:Cyclades). KEAY, Chilopoda (Île de Wight).

KFEIRALLAH, écologie de Nopoiulus kochi (Egypte).

KIME, populations (Diplopoda) des forêts (Belgique); °limites écologiques de quelques espèces.

LAFFERT, écologie et géographie des Diplopodes d'Allemagne.

LORING, Paupropoda et Symphyla Mc CLAIN, diplopodes du désert de Namibie.

MATIC, Chilopoda (Roumanie et Yougoslavie).

MAURIN, écologie des Diplopodes du Niger.

MEYER, structure, abondance, biomasse des Macroarthropodes du sol en forêt de feuillus résiduelle (Tyrol). MIKHAILOVA, diplopoda (Extrême-orient Soviétique).

NEGREA, Chilopoda des forêts de Roumanie PEDROLI-CHRISTEN, Diplopodes de Suisse

PEITSALMI, effets des changements de conditions externes sur croissance et développement des Diplopodes vivant dans les souches des terres marécageuses.

RIBAROV, Chilopoda (Bulgarie)

SNIDER, Polydesmides (Michigan, USA); °dynamique des populations de forêt (Est-USA); facteurs STEINMETZGER, écol. de quelques espèces (Diplopoda) limitant les populations (Diplopodes).

STRIGANOVA, °diplopodes des prairies subalpines.

SUMMERS, microhabitats en forêt (Chilopoda); analyse de divers paramètres (Chilopoda-environnement).

**COMPORTEMENTS :**

FRANKLIN, rôle de l'information tactile dans l'orientation des Myriapodes. Mouvements scandés de l'antenne chez Polydesmus inconstans et Harpaphe haydeniana.

**AGRONOMIE :**

BAKER, contrôle biologique d'Ommatoiulus moreleti en Australie.

BALA SUBRAMANIAN, pesticides et Myriapodes.

SAHLI, cycle des Diplopodes nuisibles aux cultures en Bourgogne (France).

SHUKLA, effets des insecticides/pesticides sur les enzymes digestives des Diplopodes; effets des irradiations d'U.V. sur les enzymes digestives.

**BIOSPEOLOGIE :**

NEGREA, Chilopoda (Roumanie, Espagne, Cuba, Venezuela).

SHEAR, Chordeumides (Amérique du Nord, Mexique).

PIERRARD, contrôle des diplopodes nuisibles.

**SYSTEMATIQUE ET FAUNISTIQUE :****CATALOGUES, CARTOGRAPHIE, NOMENCLATURE:**

HOFFMAN, Catalogue des Diplopodes d'Amérique Centrale et du Nord.

JEEKEL, Catalogue des Diplopodes ; Nomenciator Chilopodorum.

KIME, Atlas de répartition des Myriapodes en Europe occidentale.

MINELLI, Catalogue et Bibliographie des Chilopodes.

**REVISIONS, TAXINOMIE, SYSTEMATIQUE, PHYLOGENIE, ZOOGEOGRAPHIE:**

CONDE, rév. des Diplopodes Pénicillates.

EASON, espèces européennes et méditerranéennes de Lithobiidae décrites par Verhoeff et déposées au British Museum (Natural History).

ENGHOFF, rév. du g. Acipes; rév. des g. Paranopoiulus, Orinisobates, Dolichoiulus; rév. générique des Blaniulidae.

HASENHUETL, Paupropoda.

HOFFMAN, rév. familles Chelodesmidae, Oxydesmidae, Gomphodesmidae et Platyrhacidae.

JEEKEL, systématique et zoogéographie des Paradoxosomatidae (du monde entier).

Faunistique des Diplopodes de l'Amérique du Sud et des Caraïbes.

KOCH, rév. Scolopendridae australiens.

P.M. JOHNS, cf. ZONE

INDO-AUSTRALO-PACIFIQUE

KOREN, variabilité intrafamiliale des Cryptopidae.

LEWIS, taxinomie des Scolopendromorphes.

LORING, Paupropoda et Symphyta.

MATIC, Chilopodes méditerranéens.

MEIDELL, analyse cladistique des Polydesmides européens.

PEREIRA, Géophilomorphes néotropicaux.

RUHBERG, rév. systématique des Onychophora.

SHEAR, Chordeumides des grottes d'Amérique du Nord et du Mexique; petits polydesmoides d'Amérique du Nord.

SHELLEY, rév. Xystodesmidae (g. Dynoria, Dicellarius, Hubroria, Stelgipus, Cheiropus, Lyrranea et genre nouveau).

SHINOHARA, rév. Chilopodes et Diplopodes du Japon, Corée et zones voisines;

taxinomie des Chilopodes.

WURMLI, monographie des Scutigeromorphes.

**PALEONTOLOGIE :**

HANNIBAL, un diplopode spinifère du Carbonifère du Kansas (USA).

**ZONE PALEARCTIQUE :** AFRIQUE du NORD, ZAPPAROLI, Chilopodes.

AFGHANISTAN: EASON, petite collection de Lithobiidae.

ALLEMAGNE: LÄFFERT, Diplopodes.

AUTRICHE: KOREN, synopsis des Chilopodes de Carinthie et Tyrol.

MEYER, Diplopodes (écologie) du Tyrol (oberen Inntal).

BULGARIE: RIBAROV, Chilopoda.

CHINE: ZHANG et LI, Chilopodes et Diplopodes.

COREE: SHINOHARA, Chilopodes et Diplopodes.

EGYPTE: KHEIRALLAH, Nopoiulus kochi, nouveau pour l'Egypte.

ESPAGNE: DOMINGUEZ, Symphyta JORDANA BUTTICAZ, Myriapodes de Navarre

NEGREA, Chilopodes cavernicoles et épigés

SERRA, Chilopodes VICENTE, Diplopodes.

- FRANCE: GEOFFROY, Chilopodes et Diplopodes (Alpes, Causses Majeurs, Centre).  
 GRANDE-BRETAGNE: BLOWER, synopsis des Diplopodes.  
     KEAY, Chilopodes de l'Île de Wight.  
     RICHARDSON, Chilopodes et Diplopodes du Yorkshire.
- GRECE: GEOFFROY, KARAMAOUNA, diplopodes dans un écosystème insulaire (Cyclades).  
 ZAPPAROLI, Chilopodes.
- IRAN: ENGHOFF, Iulidae.
- ITALIE: MINELLI, faune des Chilopodes  
 MIRANDA RESTIVO, Lithobiomorphes: Italie septentrionale - °Sardaigne.  
 ZAPPAROLI, Chilopodes des Alpes occidentales et de l'Apennin Central.
- JAPON: SHINOHARA, Chilopodes et Diplopodes.  
 TAKANO, Myriapoda.
- Madère: BLOWER, Myriapodes.  
 ENGHOFF, les Cylindroiulus endémiques.
- POLOGNE: STOJALOWSKA, Diplopoda.  
 JEDRYCZKOWSKI, Diplopodes des Mts Swietokrzyskie; °Diplopodes des Carpathes.
- PORTUGAL: DOMINGUEZ, Symphyla.
- ROUMANIE: MATIC, Chilopodes.  
 NEGREA, Chilopodes des forêts et cavernicoles.
- SUÈDE: ANDERSSON, Chilopodes.  
 ENGHOFF, Diplopodes de la région de Gothenburg.
- SUISSE: PEDROLI-CHRISTEN, Diplopodes (notamment du Tessin).
- TURQUIE: MATIC, Chilopodes.  
 ZAPPAROLI, Chilopodes.
- U.R.S.S.: MIKHAILOVA, Diplopodes (Extrême-orient soviétique)  
 GOLOVATCH, Diplopodes (Caucase).
- YUGOSLAVIE: MATIC, Chilopodes.

#### ZONE ETHIOPIENNE :

- Afrique Orientale: HOFFMAN, Diplopoda (Tanzanie-Kenya)  
 DEMANGE, MAURIES, Diplopoda (mission Chelazzi)
- AFRIQUE du SUD: LAWRENCE, Chilopodes, Diplopodes - McCLAIN, diplopodes (désert Namib).
- CAP VERT: HUTHER, Symphyla.
- CÔTE d'IVOIRE: GEOFFROY, DEMANGE, MAURIES, diplopodes de savane.
- KAMERUN: DEMANGE, MAURIES, Diplopoda
- NIGER: MAURIN, Diplopoda.
- SIERRA LEONE: BLOWER, Myriapoda.

#### AMÉRIQUE :

- CUBA: NEGREA, Chilopodes cavernicoles et épigés.  
 GUYANE Fr.: °Mauries, Diplopodes.
- MARTINIQUE: DEMANGE, Chilopoda, MAURIES, Diplopoda.
- MEXIQUE: ZAPPAROLI, Chilopodes.
- U.S.A.: ENGHOFF, nouvelle famille d'Iulida. KANE, Polyxenus lagurus.  
 SHEAR, Chordeumides cavernicoles ; ° petits Polydesmoides.  
 SHELLY, Xystodesmidae SNIDER, voir ECOLOGIE .
- VENEZUELA: NEGREA, Chilopodes cavernicoles et épigés.

#### ZONE INDO-AUSTRALO-PACIFIQUE :

- Sud-est asiatique: ENGHOFF, Iulidae.
- AUSTRALIE: KOCH, Scolopendridae....; P.M. JOHNS, Dalodesmidae, Spirobolellidae,  
 HIMALAYA: WURMLI, Chilopoda. Cambalidae
- INDONESIE: WURMLI, Chilopoda.
- NEPAL: MAURIES, Diplopoda (mission Löbl et Smetana).  
 SHEAR, encore des Nepalella!
- Iles du PACIFIQUE: MAURIES, diplopodes (missions soviétiques).
- VIET-NAM: GOLOVATCH, Diplopoda.
- NOUVELLE-ZELANDE, P.M. JOHNS, Dalodesmidae, Spirobolellidae, Cambalidae.

FOR INFORMATION

Mr. J. Gordon BLOWER , in his presidential address at the Farewell Dinner of the 5th International Congress of Myriapodology at RADFORD UNIVERSITY on 7th August 1981, announced that the Executive Committee had decided :

1. *To accept Dr. C.A.W. JEEKEL's invitation to hold the next Congress at AMSTERDAM in 1984.*
2. *To accept a provisional invitation to hold the following Congress at BARCELONA in 1987.*
3. *To raise the minimum annual subscription for membership of the C.I.M. from 25 francs to 40 francs ( 30 francs for students).*

The president also announced that 38 out of a total membership of 230 had attended the Congress and thanked Messrs Demange and Mauriès for all the work they do on behalf of members.
